

Uber Ride Booking Dashboard – NCR Region

Data-Driven Insights from Customer, Driver, and Booking Behavior Analysis

Project Overview: Unveiling Uber's NCR Dynamics

Regional Focus

Analyzed extensive Uber ride booking data specifically for the National Capital Region (NCR) to uncover localized trends.

Tooling

Dashboard developed and visualized using the robust capabilities of **Microsoft Power BI**, ensuring interactive and dynamic insights.

Core Analysis Pillars

- Booking Trends & Patterns
- Revenue & Distance Metrics
- Customer Behavior Profiling
- Driver Performance Evaluation
- In-depth Cancellation Analysis

Overall Business Performance at a Glance

150K

Total Bookings

A substantial volume indicating high demand and market penetration in the NCR region.

72M

Total Revenue

Significant revenue generated, reflecting the economic impact and success of Uber's operations.

478.12

Avg. Booking Value

Average value per booking, showcasing consistent customer spending patterns.

3.65M

Total Ride Distance

Cumulative distance covered, highlighting the extensive reach and operational scale.

9K

Incomplete Rides

A relatively low number, suggesting efficient dispatch and service delivery.

Insight: High booking volume paired with robust revenue generation and a minimal rate of incomplete rides underscores a strong operational foundation.

Booking Trends & Status Analysis

Monthly Booking Stability

Analysis of monthly booking trends reveals a generally stable demand across the year, suggesting consistent user engagement.

- 1

Completed

93K (62%)

The majority of rides are successfully completed, indicating effective service execution.
- 2

Cancelled

37.5K (25%)

A notable percentage, highlighting an area requiring focused intervention and strategy.
- 3

Incomplete

19.5K (13%)

While smaller, incomplete rides still impact user experience and operational efficiency.

Insight: While most rides are successfully completed, the significant volume of cancellations represents a critical area for operational improvement and customer retention strategies.

Preferred Payment Methods in NCR

94K

UPI

Dominant choice, reflecting the widespread adoption of digital payments.

25K

Cash

Still a significant payment option for a segment of users.

12K

Uber Wallet

Growing preference for in-app payment solutions.

10K

Credit Card

Consistent usage among card-holding customers.

8K

Debit Card

Another digital alternative for secure transactions.

Insight: Digital payments overwhelmingly dominate the NCR region, with UPI emerging as the most preferred method, indicating a strong trend towards cashless transactions.

Customer Dashboard: Key Engagement Metrics

Total Customers

148.788K

A vast user base demonstrating Uber's extensive reach in the NCR market.

Cust. Cancellation Rate

0.07

A low rate, suggesting overall satisfaction with the booking process and service.

Avg. Customer Rating

4.24

High average rating, reflecting positive experiences and service quality.

Avg. Booking Value

478.12

Consistent average spend per customer, supporting revenue stability.

Insight: Customers exhibit high satisfaction, as evidenced by strong average ratings and a commendably low cancellation rate, pointing to a generally positive user experience.

Customer Behavior: Diving Deeper into Cancellations

Payment Type Split

Digital: 124.63K (83.09%)

Cash: 25.37K (16.91%)

Reinforces the preference for digital transactions among customers.

Top Cancellation Reasons

- **Wrong Address** – 2.4K bookings
- **Change of Plans** – 2.4K bookings
- **Driver Not Moving** – 2.3K bookings
- **Driver Asked to Cancel** – 2.3K bookings
- **AC Not Working** – 1.2K bookings

These reasons highlight critical areas for improving the booking and ride experience.

Insight: The data strongly suggests that both address accuracy during booking and driver conduct during the ride are direct and significant factors influencing ride cancellations.

Customer Satisfaction: Rating Distribution

Insight: A significant majority of customers consistently provide ratings of 4 or 5, underscoring widespread positive ride experiences and satisfaction with Uber's service.

Driver Dashboard: Performance & Efficiency

Avg. VTAT 8.46 Average Vehicle Turnaround Time, a key metric for driver efficiency.	Driver Cancellation Rate 0.18 Percentage of rides drivers cancel, warranting closer examination.
Avg. Driver Rating 4.11 Reflects overall customer perception of driver service quality.	Avg. Ride Distance 24.34 Average kilometers covered per ride, indicating typical trip lengths.

Insight: While average driver ratings remain strong, the driver cancellation rate presents a critical area for monitoring and targeted intervention to maintain service reliability.

Optimizing Driver Performance & Customer Experience

Bookings by Driver Rating

- **Rating 3:** 7K bookings
- **Rating 4:** 63K bookings
- **Rating 5:** 23K bookings

Drivers rated 4 are the backbone of booking fulfillment, underscoring the importance of their consistent performance.

Driver Cancellation Reasons

- **Customer related issues** – 6.8K
- **Customer coughing/sick** – 6.8K
- **Personal & car related issues** – 6.7K
- **Too many passengers** – 6.7K

Understanding these reasons can lead to proactive measures to reduce driver-initiated cancellations and improve the overall ride ecosystem.

Insight: The majority of bookings are successfully facilitated by drivers with a 4-star rating, while health and passenger-related issues emerge as primary drivers for driver cancellations.
